

Jared Gentry

Detail-oriented Software Engineer with a strong background in developing modern web applications, specializing in frontend development with expertise in React, Next.js, and TypeScript. Experience in building scalable, high-performance user interfaces while also proficient in full-stack development, including backend integrations with FastAPI, WebSockets, and Supabase. Passionate about delivering intuitive, performant, and user-centric solutions.

LinkedIn: <https://www.linkedin.com/in/jared-gentry-48923b113/>

Location: Spartanburg, SC

Languages

HTML, CSS, JavaScript, TypeScript, Python

Beginner Japanese

Technologies

React, Next.js, Tailwind CSS, Supabase, Shadcn, Jest, React Testing Library, Cypress, FastAPI, Docker, Kubernetes, Git, WebSockets, Chrome Extensions

Professional Experience

Freelance Full-Stack Developer

FTLOS, May 2025 - Present

- Designed and developed a sports-focused social networking web application for a client
- Built a responsive single-page application using React and Tailwind CSS
- Developed a modular Express backend with Supabase Auth and file storage integration
- Facilitated user connections through shared ratings of teams, athletes, and sports
- Deployed the application to a Linode VPS for global accessibility and scalability

Founder

Gistr LLC, January 2025 - April 2025

- Built a SaaS business that enables users to quickly summarize web articles for later reading.
- Developed and deployed a full-stack Next.js application with a focus on performance and usability.
- Designed, developed, and launched a companion Chrome extension to enhance user experience and streamline article summarization.

Front End Software Engineer - Freelance

ReThink, July 2024 - January 2025

- Led front end development for a B2B AI-powered construction software application.
- Built a highly interactive UI using React, Next.js, Tailwind CSS, and Shadcn.
- Collaborated with backend engineers to integrate AI-driven features and optimize API performance in a fast-paced startup environment.

Senior Software Engineer

KBR, February 2021 - February 2024

- Converted a TypeScript React SPA to a full-stack Next.js application and deployed it using Docker, Kubernetes, and Helm.
- Developed a BFF application to connect Next.js frontend with main microservice using Kafka and WebSockets.
- Worked remotely for Space Camp, a software factory for the Space Force, with a team developing real-time web applications for Space Force organizations including the NSDC and the 30th OG.
- Practiced Extreme Programming principles including pair programming and TDD while building a React, TypeScript frontend app and NestJS backend server.
- Implemented near pixel-perfect designs using Tailwind CSS and Material-UI.
- Maintained over 98% code coverage in both the frontend and backend repos using Jest and React Testing Library, while also maintaining e2e tests using Cypress.

Software Engineer

Naval Information Warfare Center, June 2019 - February 2021

- Worked at Kessel Run in Boston, MA with a team developing a suite of modern web apps for Air Force maintainers.
- Practiced Extreme Programming principles while building a React frontend app and Java Spring Boot backend microservice.
- Reduced Cypress testing time by 50% using stubbed out API calls.
- Utilized Redux on the frontend to manage state and handle multiple API calls to other microservices.

Education

Master of Science in Computer Science

University of South Carolina, August 2017 - May 2019

GPA: 4.0

Bachelor of Science in Bioengineering

Clemson University, August 2012 - May 2016

GPA: 3.86
